

Fluoride Retro Fit Kit

This filter container and lid will convert an original Durand Water System into a Fluoride reduction system

Fluoride filter container and lid.
Available in white, blue, black etc
\$70 + postage

On order we will need the glaze colour/ design of your original system. Also a diameter measurement across the inside of the top of the existing storage container (do not include the ceramic walls just the opening.) see diagram on right. As this product is individually handmade it is not perfectly round. We need the smallest diameter, so check the measurement in a couple of directions.

*please note- Check water level in the bottom or storage container before refilling. If the storage container is full or nearly full, then filling of the filter container may leak out from this point.

Original Durand System

Fitted with the retro fit kit
